

1. Installing Python on Windows

Step 1 – Download Python

- Go to: <https://www.python.org/downloads/>
- Click "**Download Python [version]**" (latest stable version recommended).

Step 2 – Run the Installer

- Open the downloaded **.exe** file.
- **Important:** Check "**Add Python to PATH**" at the bottom of the installer.
- Click "**Install Now**".

Step 3 – Verify Installation

- Open **Command Prompt** (**Windows + R**, type **cmd**, press Enter).
- Type **python --version** and press Enter, You should see the installed version.

2. Installing Python on macOS

Step 1 – Check if Python is Pre-installed

- Open Terminal (**Command + Space**, type "**Terminal**").
- Type **python --version** and press Enter, You should see the installed version.

Step 2 – Install (if not installed or outdated)

- Go to: <https://www.python.org/downloads/>
- Click "**Download Python [version]**" (latest stable version recommended).
- Open the **.pkg** installer and follow the instructions.
